DETAILED ACTION

Drawings

1. The drawings are objected to because detail 14 in figure 1 does not point to anything. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3765

3. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Lam (6644520).

Lam teaches an adjustable hanger (Figure 4) comprising a hook member (401), a pair of arm members (411/412) attached thereto and comprising an upper portion and a lower portion inhibiting inadvertent disengaging, and each of a pair of extension assemblies (421/422) engaging one of the arms (Figure 3), each extension assembly comprising a base member and an extension member comprising a support portion and a guide portion, wherein the base member comprises a stanchion receiver assembly, as well as teeth and pawl (Figures 2a-2c). The assembly as taught allows for sliding of the extension members along the arm members, while ensuring engagement and a smooth slide.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
